TREE TRAYS

A strong 160 hole tree tray that is easy to process automatically. The tray has a high loading rate and is suitable for tree and plant cuttings such as box (buxus), yew (taxus), conifers, and various grasses.

- The design of the cup and the folded edge mean the tray is perfect for automation.
- Strong tray so it doesn't bend in the middle
- Cost saving because this tray enables you to grow more plants per/m²
- Prevents root rotation
